Prehistory | Origins of the Internet

- The desire to communicate (also remote)
- First instruments: language and speech
- Communication form: written

Writing on rocks, cave walls, papyrus 😊

- Remote communication?
 - Fire signals
 - Morse Code
- 19th century: electricity and telegraph

History | Origins of the Internet

1837 Charles Babbage designs “first computer”

1863 Jules Verne:

"photo-telegraphy allowed any writing, signature or illustration to be sent faraway - every house was wired"

1891 – Ada Lovelace – first program for Babbage machinery

1936 Alan Turing – describes Turing machine

1939 HP is founded (Bill Hewlett, David Packard)

History | Origins of the Internet

1961-1972: first communication's attempts using packet-switching

1961: Kleinrock – proposed a theoretical model

1964: Baran – implemented the communication among US military computers

1967: ARPAnet was projected by Advanced Research Projects Agency

1969: first operational node ARPAnet, a network formed by 4 computers

History | Origins of the Internet

1972:

- public demonstration of ARPAnet technologies
- NCP (Network Control Protocol) – the first host-host protocol
- First program for electronic mail (e-mail)
- The sign @ is introduced
- ARPAnet contains 15 nodes

History | Origins of the Internet

1972-1980: The *Internetworking* concept appeared. Also, proprietary networks appeared.

1973: DARPA (Defense Advanced Research Projects Agency) – interconnected networks; Robert Metcalf (Harvard) developed Ethernet technology that allowed data transfer using coaxial cable

1974: Cerf si Kahn – proposed a communication protocol entitled TCP(Transmission Control Protocol)

1978: TCP/IP protocols stack was standardized via RFC (Request For Comments) documents

In the late of 70s: proprietary networks stacks appeared: DECnet, SNA, XNA

1979: ARPAnet contained 200 nodes

History | Origins of the Internet

1980-1990: new protocols, the network number was increasing, Internet

1983: TCP/IP was used

1982: SMTP (Simple Mail Transfer Protocol) was defined

1983: DNS (translation of host name into IP address and vice versa) appeared

1985: FTP (File Transfer Protocol) protocol appeared

1986: Internet backbone appeared

1988: some congestion control mechanisms for TCP were introduced

History & Present | Origins of the Internet

1990 ->2000->2016: World Wide Web, new commercial network applications

Early '90:

- **World Wide Web**

After the late '90 -> present :

- Global Networks
- Wireless networks
- Commercial applications of the Internet
 - instant messaging, P2P file sharing
 - social networks, video-streaming,
 - cloud-computing,
 - ...

Present
